

CROM - Crowd Management System – the most flexible and non-permanent system in the world. The spectator-friendly system ensures full view of the match and minimizes fall damage of the audience. CROM is used for player entrances, queuing spaces, access routes and crowd line-ups, and CROM High is accepted by authorities as high-capacity emergency exits when mounted with the Quick-Release function.

It is easy to set up, dismount and relocate as needed.

The unique features of CROM reduce the need for security, law enforcement and emergency personnel etc., as the system is difficult to climb. At the same time, it serves as temporary perimeter protection for the personnel.

Advantages: Logistic savings on storage, transportation, setup and dismantling. The system is customized and can be installed in angles up to 35 degrees.

System data	CROM 50	CROM High	Standard set for CROM 50
Height:	1.20m	2.20m	1 35m net (available in the required length) 1 trolley bag (90x40x38cm) 2 tightening mechanisms 4 aluminium support posts 4 attachment straps for tightening mechanisms 1 user manual
