

TACRION – Tactical Riot System – is an effective barrier for separating crowds, including hostile crowds. The effective barrier is mounted between two fixed points on permanent structures like buildings, existing steel posts or purposive steel posts, containers or heavy vehicles etc. The customized net mesh makes it almost impossible to climb, due to the height and flexibility of the material. Other features include high force absorption and climbing difficulty by several people. It can further be used as emergency exit, as the Quick-Release function dismounts the net instantly on demand.

TACRION is available in two versions – with and without 1.3mm steel wires in the net mesh. The system is designed to withstand attacks with e.g. wire cutters, pyrotechnics and projectiles such as brick, stones etc.

Advantages: Logistic savings on storage, transportation, setup and dismounting.
The system is customized.

System data		Standard set
Height:	2.5m	1 35m net (available in the required length) 1 bag for the net (110x80x60cm) 2 tightening mechanisms 2 bags for tightening mechanisms (45x25x73cm) 4 steel posts 1 bag for steel posts (200x15x15cm) 4 attachment belts 2 wire clamps 1 user manual
Length:	up to 35m	
Weight:	76kg/89kg (reinforced) at 35m	
Net mesh size:	60mm	
Breaking force:	>50 kN	
Flame resistance:	Tested according to DIN 4102-1 B1 and B2	
Operating temperature:	-40°C to + 60°C for storage and use	
Colour:	Black
